

### Front Brake Pad Installation:

Please note that the caliper we have used to explain is slightly different to the one you will have however the process remains the same.

1. Separate the two halves of the brake caliper – they will just push apart.
2. Sit the clip on the smaller half as shown below (image 1).
3. Reattach the larger half of the brake caliper as shown below (image 2).
4. Insert the brake pad into the groove as shown (image 3).
5. Attach the larger pad as shown (image 4 + 6).
